better for business

What is Paperless Boarding and Mobile Check-in?

bmi has recently launched an innovative new Paperless Boarding system, allowing your clients to check-in online for bmi flights and to have their boarding pass delivered electronically to their mobile phone or PDA. The new paperless system, will deliver a two-dimensional barcode boarding pass to mobile phones with picture messaging (MMS) capabilities. We also offer Mobile Check-in, which enables your client to complete the entire check-in process from a mobile device. The boarding pass is sent to their mobile device as an MMS message, in exactly the same way as Paperless Boarding. To access Mobile Check-in, they'll simply need to access flybmi.com from their mobile phone or PDA.

How do my clients use the service?

If your client is travelling on one of the eligible routes below, and would like to take advantage of Paperless Boarding, they'll need to check-in for their flight online at flybmi.com. They'll be able to select whether to print their boarding pass, or have it sent directly to their mobile phone or PDA. Your client will need to enter their mobile number and the boarding pass will be delivered to their phone, enabling them to continue through security and board their flight paper free.
